PRODUCT

# CAMPUS LOOP

A trusted campus exchange for things students no longer need.

PRODUCT MANAGEMENT MINOR PROJECT

Presented by Anas Anjum | November 2026

**BUY / SELL**
**DONATE**

# Useful items stay idle. Students still need them.

A two-sided campus problem: unused supply on one side, unmet student demand on the other.

SUPPLY SIDE

## Items with value are left unused

**67%** kept in a room or thrown away

8 of 12 responses to the unused-item follow-up

↔

DEMAND SIDE

## Students need affordable pre-owned essentials

**0 / 13** reported using a platform to buy or sell used items

Survey respondents relied on informal alternatives

**CampusLoop connects useful items with students who need them.**

*Source: CampusLoop student survey; unused-item response n=12; platform-use question n=13.*

# From discovery to a measurable product plan

The work follows the product lifecycle: define the problem before prioritising, designing and planning the solution.

**01 DISCOVER**

Survey · interviews
competitor review

**02 DEFINE**

Problem · users
vision

**03 SPECIFY & PRIORITIZE**

PRD · 12 stories
RICE / MoSCoW

**04 DESIGN**

8 wireframes
clickable Figma

**05 PLAN**

MVP / V2 / V3
metrics + roadmap

**06 LAUNCH**

GTM positioning
channels + seeding

**MEASURE & ITERATE**

Track weekly exchanges, verified sign-ups, listing completion and four-week retention.
Use feedback to inform the next discovery cycle.

*The project abstract is a supporting summary of the work, not a separate lifecycle stage.*

# A small, focused first round of student research

The research was used to surface early needs and product hypotheses—not to claim campus-wide representativeness.

**13**

**Survey responses**

Google Forms · anonymous

**2**

**Student interviews**

Both first-year students

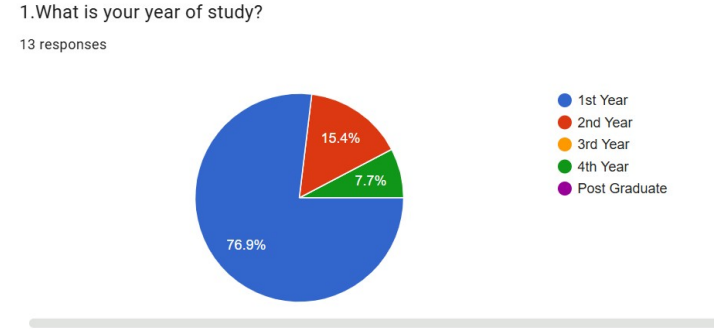

**10**

**Survey questions**

Year, residence, habits, trust

## What the research explored

- Unused items and current disposal
- Buying / selling behaviour
- Trust and safety preferences
- Interest in buy, sell and donate together

## Who answered?

77% were first-year students (10 of 13).
62% were day scholars (8 of 13). Hostel residents were underrepresented (1 of 13).

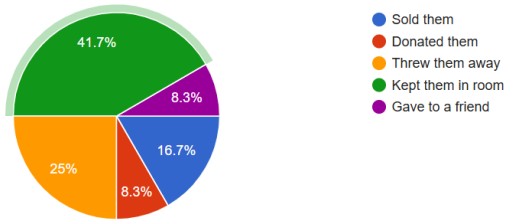

*Question-level counts vary from 11 to 13. The survey was a convenience sample shared through student groups.*

# Three findings shaped the product direction

The strongest signals point toward reuse, verification and a combined exchange model.

5. What did you usually do with those unused items?

12 responses

**66.7%**

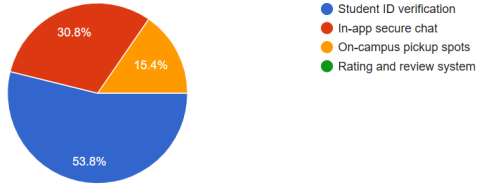

**kept idle or discarded**

Unused-item actions · n=12

9. What features would build your trust in a campus exchange platform?

Copy

13 responses

**53.8%**

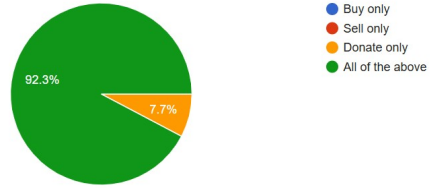

**selected student ID verification**

Trust feature · n=13

10. Would you prefer to buy, sell, donate, or all three on such a platform?

Copy

13 responses

**92.3%**

**want buy, sell and donate**

Preferred platform model · n=13

**Product implication: make student verification visible and make donation a first-class option.**

*Source: Google Forms. Percentages are calculated from the response counts shown in the original charts.*

# Students want affordability without sacrificing trust

Both interviewees were first-year students. Their comments add context to the survey signals.

**Students want affordable, good-condition items from a trusted campus community.**

### AFFORDABILITY

Finding second-hand academic books in good condition at reasonable prices.

### VERIFICATION

Both participants saw college ID or institutional email verification as important.

### TRANSPARENCY

Clear photos, descriptions and item-condition details help buyers decide.

### CAMPUS CONVENIENCE

Students preferred exchanging items within their own college community.

### SIMPLE DISCOVERY

Clear categories for books, stationery, electronics and essentials.

### SELL / DONATE

No convenient place to pass on unused items to genuine students.

*These are qualitative themes from two interviews, not findings that can be generalised to the whole college.*

# The gap is campus relevance + structured discovery

CampusLoop is positioned between broad classifieds and informal student group chats.

| ALTERNATIVE | WHAT IT OFFERS | GAP IDENTIFIED IN THE PRD |
|---|---|---|
| **OLX** | Large audience; many categories | No campus filter; spam risk |
| **Facebook Marketplace** | Familiar profiles; easy to use | No student verification |
| **Quikr** | Wide reach | General-purpose and cluttered |
| **Campus WhatsApp / Telegram** | Free; familiar student community | Messages get buried; no structured search |
| **Doing nothing** | No effort | Useful items remain idle or are discarded |

**CampusLoop hypothesis: verified students + searchable listings + a built-in donate option.**

*Competitor observations are taken from the CampusLoop PRD and should be treated as a project-level comparison.*

# A campus-only exchange, built around student trust

One focused experience for buying, selling and donating useful pre-owned items.

**Keep useful things moving within the student community.**

01

### VERIFIED COMMUNITY

Campus email or student ID check before account activation.

02

### EASY DISCOVERY

Search, categories and clear item details help students find relevant listings.

03

### REUSE BY DEFAULT

Sell an item or choose “Donate for free” when money is not the goal.

### MVP: THE CORE EXCHANGE

Verification · Listings · Donate option · Search / filters · Item details · Seller contact · Sold / given status · Basic reporting

### NOT IN MVP

Payments · delivery · cross-campus listings · advanced ratings

# Turn the product vision into testable scope

The PRD contains 12 user stories, with acceptance criteria and release mapping.

## MVP REQUIREMENTS

### Must-have stories

- **US1 Student verification**
- US2 Create a listing with photos
- US3 Search and filter
- US4 View item details
- US6 Donate items for free
- US9 Mark as sold or given
- US12 Basic listing reports

## TOP RICE SCORES

| RANK | USER STORY | RICE |
|---|---|---|
| 1 | US4 · Item details | 20.0 |
| 2 | US6 · Donate items | 9.6 |
| 3 | US2 · Create listing | 9.0 |
| 4 | US1 · Verified sign-up | 8.0 |
| 5 | US3 · Search & filter | 7.2 |

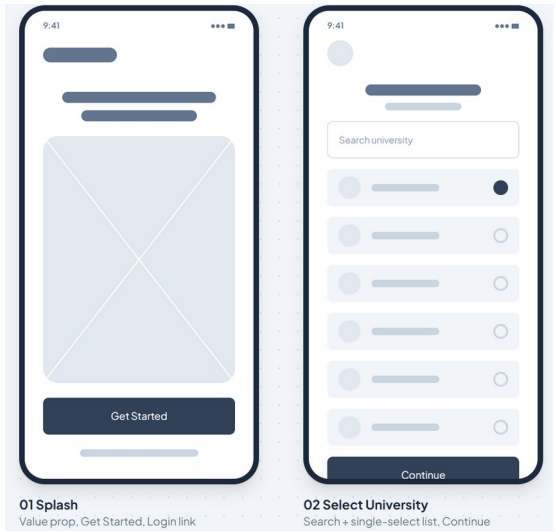

Verification stays in MVP: trust is a gating need, even though RICE is not its only decision input.

*RICE = Reach × Impact × Confidence ÷ Effort. Scores are estimates from the PRD, not measured performance.*

# Eight low-fidelity screens define the core experience

The wireframes cover onboarding, discovery, product evaluation, seller contact and listing management.

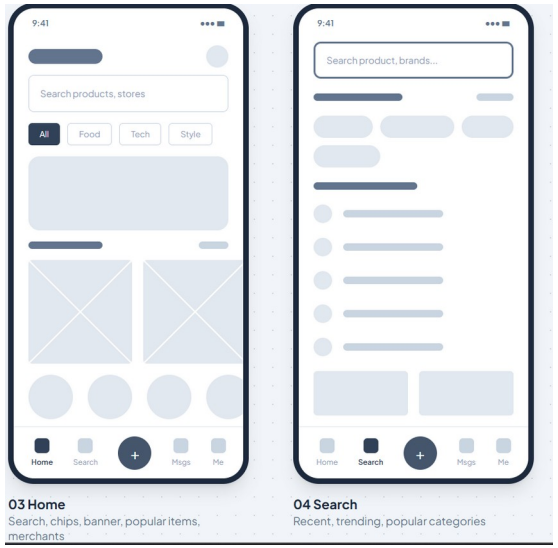

**01–02** Welcome & select university

01 Splash
Value prop, Get Started, Login link

02 Select University
Search + single-select list, Continue

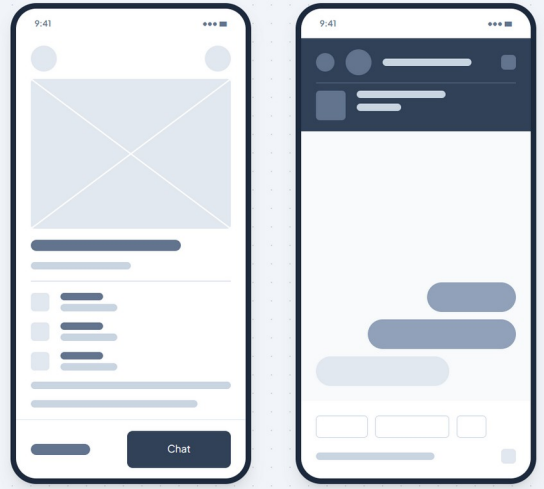

**03–04** Home & search

03 Home
Search, chips, banner, popular items, merchants

04 Search
Recent, trending, popular categories

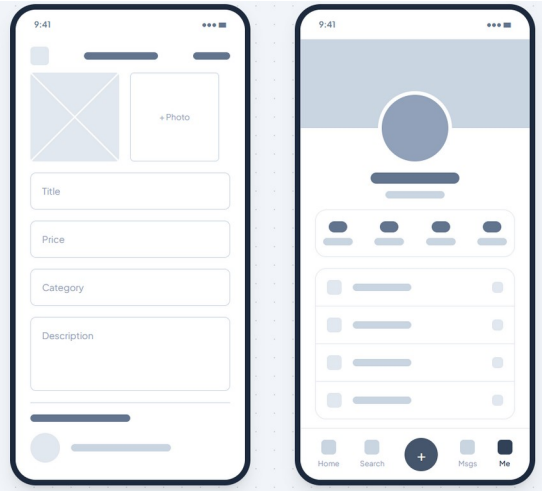

**05–06** Item detail & chat

05 Product Detail
Gallery, specs, price, Chat CTA

06 Chat
Product strip, bubbles, quick replies, menu

**07–08** Create listing & profile

07 Create Listing
Photos, form fields, options, Publish

08 Profile
Avatar, stats, menu, My Listings

*Design direction: modern, minimal and premium; mobile-first; clear labels; visible verification and transparent item information.*

# The prototype connects the buyer, seller and donor journeys

Use this slide to open Figma and demonstrate the key interactions live.

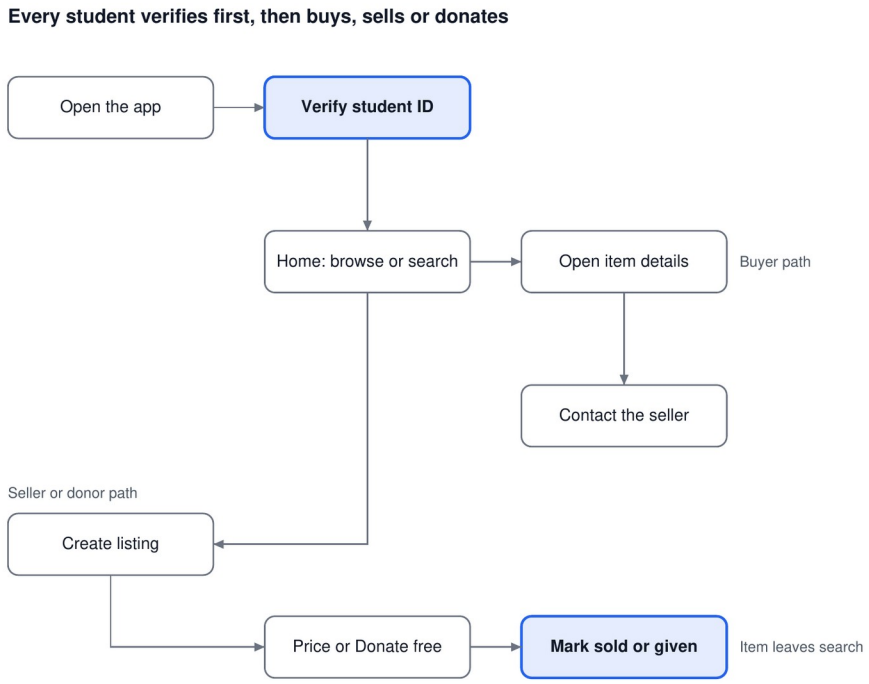

Figure 2: Core user flow (buyer, seller and donor paths)

# Build the trusted exchange first; add depth later

A phased roadmap keeps the first release focused on completing a safe exchange.

## MVP

### TRUSTED EXCHANGE

- Verified student sign-up
- Listings + donation
- Search, filters, item details
- Seller contact, status, report

Prove students can find and pass on items within one campus.

## V2

### SMOOTHER EXCHANGE

- In-app chat
- Saved / favorite items
- On-campus meetup suggestions

Reduce friction once the core exchange behaviour is established.

## V3

### HABIT & TRUST

- Impact tracker
- Seller ratings

Support repeat use and trust after enough exchange activity exists.

*Timing is indicative; each phase should be revisited using research and pilot data.*

# Define how the pilot will show progress

The North Star captures completed exchanges; the supporting KPIs measure adoption, marketplace activity and repeat use.

NORTH STAR METRIC

**Items exchanged or donated per week**

**2–3 / week**

by the end of week 4

**5 / week**

**VERIFIED SIGN-UPS**

New verified student accounts per week.

**≥25%**

**LISTING COMPLETION**

Published listings marked sold or given within 30 days.

**≥20%**

**4-WEEK RETENTION**

Week-1 active users returning for a meaningful action in week 4.

**These are proposed four-week pilot targets—not actual results. Review them after collecting real usage data.**

*Measure a completed exchange only when an item is marked sold or given (or completion is otherwise confirmed).*

# Start with one campus. Build trust before scale.

A simple go-to-market approach: create initial supply, launch within existing student communities, then learn.

01

### SEED LISTINGS

Invite early student contributors and collect genuine book, study-material and essentials listings.

02

### LAUNCH FREE

Open access within one college; make buying, selling and donation easy to understand.

03

### GROW THROUGH CAMPUS

Use class / hostel groups, college social pages, student clubs and word of mouth.

## CampusLoop keeps useful things moving within the student community.

**Research-led • Prioritised • Designed • Ready for prototype testing**
